PLEASE NOTE.—PRICES OF EMPTY BOWLS.—When ordered alone these do not include Packing and Carriage, which is charged extra.

ANEMONES.

Cultivation.—The Anemone, or Wind Flower, thrives best in rich soil, which should be fairly well drained. The single and double varieties may be planted for succession from the latter part of September until April, although we do not recommend the autumn except in warm and sheltered situations: for exposed and cold positions plant from early January to April.

If by parcel post add postage at zone rates; weight 2 lb. per 100. Dozens mailed free.

Carters Empress Poppy Anemone.

Carters Empress Poppy.—SUITABLE FOR VASE DECORATION, LASTING WHEN CUT. An easily grown type that should be found in every garden. They come into bloom the end of May and throughout June. Colours various and brilliant. The flowers are of immense size (often measuring four inches in diameter) and great substance, invaluable for cutting and decorative purposes generally, and the very moderate price at which they are offered admits of their being extensively used for the decoration of the shrubbery border, where a constant and brilliant display can be produced.

Dry roots, per doz., .35; per 100, 2.25; per 1,000, 17.50

Carters King of the Scarlets.—THE TRUE ENGLISH VARIETY. Intense brilliant scarlet, very double. A fitting companion to our well-known Single *Empress Poppy* Anemone. The flowers are of great size, intensely double, and remarkably brilliant in colour, much superior in every way to the Dutch variety.

Per doz., .45; per 100, 2.75; per 1,000, 25.00

Anemone Fulgens. We offer the true early single form, fine English-grown roots of the well-known Scarlet *Pau* Anemone. A very brilliant scarlet crimson flower, rising from six to nine inches above the rich green palmate foliage; splendid for clumps in border, in a bed by itself, vase decoration, and also for naturalisation in sunny hedgerows or among the grass.

Per doz., .40; per 100, 2.50; per 1,000, 20.00

Carters St. Brigid Anemone.

Carters St. Brigid. THE TRUE IRISH STRAIN. This beautiful strain, raised originally in Ireland and first brought into prominence by our House, deserves more than passing notice. The flowers are semi-double, most varied and beautifully coloured, and if cut before fully out are most useful for decorative purposes.

Strong dry roots, per doz., .30; per 100, 2.00; per 1,000, 15.00

ANOMATHECA.

Anomatheca Cruenta.—An exceptionally pretty plant for either edging or rockwork, also does well for pots; colour, crimson scarlet; flowering end of July and August. Ht. about 8 in. Mailed free.

Per doz., .15; per 100, 1.00; per 1,000, 8.50

ACONITE (*Eranthis Hyemalis*).

Hardy winter-flowering plant; flower golden yellow. The dry roots should be planted as early as possible in autumn, almost close together in clumps about 2 in. deep if a mass of colour is desired. It makes a very pretty edging when planted in clusters alternately with Snowdrops, whilst if the blue *Chionodoxa* or *Scilla Siberica* is included in the planting, the variation of blue, white, and yellow is pleasing.

If by parcel post add postage at zone rates; weight 2 lb. per 100. Dozens mailed free.

Extra Strong Bulbs.

Per doz., .15; per 100, 1.00; per 1,000, 8.50

ALLIUM.

Hardy plants to bloom in spring and summer, suitable for borders, rockwork, and naturalising.

If by parcel post add postage at zone rates; weight 1 lb. per 100. Dozens mailed free.

Luteum.—Bright yellow flowers, producing at the end of May large heads on stems 15 in. high.

Per doz., .12; per 100, .90; per 1,000, 8.00

Neapolitanum.—Large heads of white flowers in charming clusters. Ht. 15 in.

Per doz., .15; per 100, 1.00; per 1,000, 8.50

Arum, Mrs. Roosevelt.

ARUM (Calla or Richardia).

The Arum Lily is a magnificent flower for decorative purposes, and can be easily grown in pots.

If by parcel post add postage at zone rates; weight 3 lb. per doz. Single bulbs mailed free.

Mrs. Roosevelt. This is an exceedingly hardy and beautiful variety, producing handsome soft lemon-coloured flowers and foliage of dark green, marked with splendid transparent silver blotches, making it a most attractive plant for decorative purposes. We also recommend for outdoor cultivation, but roots must be lifted in the autumn. This variety is of quite recent introduction, and attracted great attention at the Royal International and Holland House Shows, London. Each, .35; per doz., 3.50

Dracunculus (Dragon Arum).—Purple-black flowers, large leaves with mottled stems; curious and striking variety. Each, .12; per doz., 1.20

Sanctum, or Black Calla. Each, .20; per doz., 2.00

The Gold Medal awarded to Carters Flowers at the great London Chelsea Flower Show, May, 1916.

Amaryllis.

AMARYLLIS.

A showy tribe of bulbous plants, and exceedingly effective for conservatory decoration. Pot up the dry bulbs when received, in good loamy soil, and expect them to bloom the following summer, or earlier if pushed on in heat. When potting, use a compost of turfy loam and leaf-mould, coarse sand, and well-rotted cow-dung.

If by parcel post add postage at zone rates; weights given against each sort. Single bulbs mailed free.

Bella Donna (Bella Donna Lily). Soft pink. Weight 6 lb. per doz. Each, .15; per doz., 1.50

Formosissima (Jacobæ Lily). Crimson. Weight 3 lb. per doz. Each, .15; per doz., 1.50

BEGONIAS.

The tuberous-rooted Begonia has become a plant of such importance, owing to the rapid improvement it has undergone, that no garden or greenhouse can be considered complete without it.

Tubers may be started into growth from January onwards, but the sudden plunging into a very hot temperature is not conducive to a good strong plant, therefore they should be put into a medium temperature. Place them in boxes filled with leaf-mould, and as soon as the tubers are started pot into small pots in a mixture of equal parts of leaf-soil and loam, with the addition of a little silver sand. When the roots reach the sides of these pots they should be re-potted into a larger size, using a little heavier compost than before. After a few weeks again re-pot them, this time into their flowering pots, using a compost of about two parts rich loam, one part leaf-mould, with a little sand or broken mortar rubble to keep the whole porous, and some broken charcoal and dried cow manure. Pot moderately firm, and place in a cool house, keeping it close for a few days until root action commences, afterwards giving ample air, and damping floors and stagings on warm days until flowering commences. Carters Veg Vita is a splendid stimulant during the growing period.

Carters Crown Jewels Double Begonia.

CARTERS "CROWN JEWELS" BEGONIA BULBS.

The blooms are of giant size, combined with perfect form.

Carters "Crown Jewel" Begonias represent the highest state of excellence both in single and double forms. We are constantly raising new seedlings, which are possessed of greater vigour than those varieties which are continuously propagated by cuttings.

CARTERS NEW FRINGED BEGONIAS.

A magnificent single strain for bedding or for pots. Flowers very large and of great substance, with the edges of each petal beautifully frilled or fringed. A great improvement on the ordinary single Begonia, and of particular value where the rather formal character of ordinary Begonias is considered a disadvantage. The moderate price enables them to be extensively used for bedding.

COLCHICUM. (MEADOW SAFFRON).

These great Crocus-like flowers carpet the ground in September and October, with colours ranging from pure white to intense crimson. In flower borders or naturalised in grass they are most beautiful. The foliage does not appear till Spring, and is very varied. If planted in August and early September most of the Bulbs will bloom almost immediately. Colchicums should not be planted in grass-lands used for grazing.

Autumnale Major.—Large purple blooms.

Each, .10; per doz., 1.00; per 100, 7.50

Autumnale Album.—Glistening pure white. Fine when seen in masses. Each, .10; per doz., 1.00; per 100, 7.50

Autumnale plenum.—Double large lilac flowers.

Each, .12; per doz., 1.25; per 100, 9.00

CHIONODOXA.

The Chionodoxa or "Glory of the Snow," as its name denotes, is a very early flowering bulbous plant; the different varieties are of varied shades of blue and look extremely pretty in whatever way they are planted—in beds, borders, or on rockwork. Whenever possible they should be left undisturbed, as each year they will improve. Plant from September to November. Collected Wild Bulbs are worthless for garden purposes and we offer only the best cultivated strains grown.

Chionodoxa Lucilia.

Luciliae. Bright blue with large white eye, rather lighter in colour than *Sardensis*.

Mailed free. Per doz., .25; per 100, 1.50; per 1,000, 12.00

Gigantea.

Tmolusi.

Gigantea. A charming variety, with large flowers of similar shade of colour to *Lucilia*, white eye.

Mailed free. Per doz., .30; per 100, 2.00; per 1,000, 15.00

Tmolusi. An exceedingly pretty and attractive variety of a distinct bright blue colour and very free flowering.

Mailed free. Per doz., .30; per 100, 2.00; per 1,000, 15.00

Sardensis. Rich Nemophila-blue coloured flowers and very small white eye. The flowers are borne in great profusion, and the appearance of the plant when in full bloom in the early spring months is most charming.

Mailed free. Per doz., .20; per 100, 1.25; per 1,000, 10.00

CAMASSIA.

Is a handsome star-shaped flower, and very worthy of culture. It has a beautiful bloom in May or June when well grown, and, like most of the family, it flowers better in a deep sandy loam, in a rather shaded position, than in any other situation.

If by parcel post add postage at zone rates; weight 3 lb. per 100. Dozens mailed free.

Camassia Esculenta. Strongly recommended for naturalising. Ht. 1½ ft.

Per doz., .20; per 100, 1.25; per 1,000, 10.00

CROWN IMPERIALS.

The beautiful varieties of red and yellow single-flowered *Fritillaria Imperialis* are very bold and handsome when placed in the conservatory. They bloom naturally early in the season. By potting the bulbs early and assisting them with a genial temperature as soon as the young growth begins to make its appearance, they are sure to do well. Ht. 3 to 4 ft. *Photograph above*

Cyclamen.

CYCLAMEN.

A magnificent flowering plant for winter and spring decoration.

Dry Bulbs of Cyclamen.—Those who prefer growing from bulbs may obtain them in a dormant condition from September to November. These are potted up and kept in an airy place through the autumn, and brought into gradual heat in winter, according to the time they are wanted for decorating the conservatory.

FREESIA.

The Freesia is of easy culture, and the spikes of white and primrose coloured flowers are produced in great freedom. As soon as obtained, place six bulbs in a 48-sized pot filled with a compost consisting of about three parts light sandy loam and one of sweet leaf-mould, with a few small crocks and a handful of half-rotted leaves in the bottom of each pot for drainage. The pots should then be stood on coal ashes in a dry situation. As soon as the plants have made half an inch of growth they should be removed to a position near the glass in a cool frame, and shaded heavily at first. Afterwards gradually inure them to light and a little air. To assist the consequent production of stout flower spikes, waterings of tepid diluted liquid manure should be given.

Purity.—The true, pure white variety. This new and improved large variety is a decided improvement on all other varieties yet produced; is a much stronger grower, producing a larger, stronger, and bolder flower in conjunction with being very free flowering; is an excellent forcing variety, and used extensively for this purpose.

Carters Invincible Prize Gloxinia, exhibited at the Great London Flower Shows, awarded many Gold Medals.

GLOXINIA BULBS.

This beautiful flowering plant is very popular and exceedingly attractive in conservatory decoration. It has been greatly improved in the size and colours of the blossoms in recent years, and includes almost every shade. When grown from tubers they are treated somewhat like the Begonia, although during the younger stages of growth the plant prefers a moist, warm atmosphere. Directly the flower buds commence to burst they may be transferred to a drier situation, such as the conservatory staging affords. The soil recommended should be of a rich, loamy description, mixed with sand and leaf-mould, and they may be fed with liquid manure up to the time the buds appear.

Our stock of Invincible Prize Gloxinias embraces the greatest variety of coloring and form, including rich crimson, white and blue grounds, elegantly mottled, and a great variety of beautiful parti and self colours. The flowers are of immense substance, and will be found immeasurably superior to other strains.

HYACINTHUS CANDICANS.

A tall-growing bulbous plant, with long spear-like leaves. Planted in shrubberies or borders from autumn to early spring on rich soil, it throws up a candelabra-like spike of white bell-shaped flowers the following summer which are very effective, and make a splendid background for Gladiolus. Ht. from 3 to 5 ft.

HYACINTHS.

Cultural Hints.—Almost any good soil and situation suit these popular plants.

The best season for planting runs from September to the end of November. A few spare bulbs should always be planted separately to replace failures in the beds from vermin or other causes. A bed or border that has produced a heavy show of summer-flowering plants needs renovating between the time they are lifted and the planting of the bulbs. The soil should be loosened and turned over, and a quantity of well-rotted stable manure incorporated—that taken from an old cucumber or marrow bed is suitable. The whole should then be levelled and made firm, and the bulbs put in as follows:—If the bed or border is square or oblong it is best to commence at one end, and make a trench the requisite depth—say 4 in.—straight across. Into this place the bulbs at the proper intervals—say 6 in.—or if it is intended to plant tulips, daffodils, and narcissus alternately in the row, the bulbs should be put equidistant.

The time to begin potting the Hyacinth is early in September if a good and continuous succession is required. The best soil is a friable loam with a little leaf-mould and old stable manure. The 48-pot (5 in. across the top) will take one bulb nicely and larger sizes from two to three bulbs. Place the bulb, with a little silver sand underneath it, in the centre, so that when firmly planted in the soil the top will just be exposed. When the potting is completed, let the pots be placed on a level bottom of coal ashes in a frame or other open space, put a small inverted pot over the top of the bulb, and cover the whole to a depth of from 6 to 8 in. with more ashes, coconut fibre, or decayed leaves, and there let them remain. If placed in such a pit from the beginning of September, in from six to eight weeks the pots will be getting crammed with roots, and before that time it will be vain to attempt to force them to produce good flowering stems.

Early White Roman Hyacinths in Pots, and cultivated in Decorated Bowl.

EARLY WHITE ROMAN HYACINTHS.

Roman Hyacinths are exceedingly popular on account of their earliness, the succession that can be kept up by judicious plantings, the abundance of sweetly perfumed flowers, and their value for decoration in pots, baskets, or vases at seasons when white flowers are scarce. To have them in flower by Christmas they should be started early in September.

For their culture in bowls and room gardening, see page 34.

Autumn Sowing.—One of the best seasons to commence the operation of making a lawn is as soon as possible after the break-up of the hot summer weather, with the intention of sowing, if possible, at the end of August or during the early days of September. The soil is warm at the end of summer, and an abundance of rain and dew may be expected, which is very beneficial to the growth of the seed, and the young grass will have ample time to become well established before the real cold weather sets in.—*Carters Book on Lawns.* Post free from Boston.

CARTERS ENGLISH IRIS.

The English Iris is a type of this lovely tribe that is not nearly so largely grown as its beauty deserves. The species consists of many varieties, differing chiefly in shades of colour in the bloom, in which white to sky blue largely predominate, but others are bright blue grading down to the richest purple. In some a trace of yellow veins or bands is seen. They reach a height of from 1 to 2 ft., and flower in June and July. A fine border plant in deep light soil. Invaluable for cutting.

The bulbs should be procured and planted early, as they are very difficult to preserve when out of the ground.

IXIA.

No species of bulbous flowering plants exhibits in one family such brilliant colouring as the *Ixia*, and for cut flowers it is invaluable.

Dry bulbs may be procured from September to December. They are quite miniature in size, and it seems remarkable that these mites should contain sufficient vigour to put forth a profusion of lovely blooms. If planted in a warm and sheltered spot out of doors in the autumn they may be expected to flower about June. Ht. from 16 in. to 2 ft. Their culture in pots is very easy, and they prefer a nice light sandy soil, and the pots should be stood in a cold frame until the roots have become active. Should they be placed later in the greenhouse to mature, they must have plenty of air or the flowers may be scanty.

JONQUIL (or Rush-leaved Daffodil).

In all its forms is delightful in every collection of spring flowers where elegance, beauty, and delicious fragrance are the objects sought after. It is useful in a variety of ways just as the *Narcissus*, its near relation, is cultivated. The flowers are smaller, but they lose none of their great attractions on this account, either when grown in pots indoors or out in the open ground. The bulbs also being smaller, they require to be planted closer together than is recommended for the larger species.

LEUCOJUM.

The **SNOWFLAKE**, with its charming white drooping bells, should be much better known as a valuable addition to our early spring garden or on the grass. **L. VERNUM CARPATICUM** is an improved variety, and looks exquisite with its handsome white bells, just touched with a spot of green. The **L. ESTIVUM** comes into flower in June, and exhibits a very neat head with white blooms. These plants prefer a good sandy soil, but will grow in any ordinary compost. The bulbs are planted as soon as ready in autumn, about 2 in. deep and twice as far apart.

LILIES.

The time of planting Lilies ranges from September to March, but as every day Lilies are out of the ground they lose something of their strength, the earlier they can be procured and planted the better. A few inches of prepared soil over the crowns of the bulbs is useful in many ways. For the smaller varieties, plant in clumps, each bulb about 6 in. apart, leaving more space for the strong and larger species. The most striking mode of planting is in groups of three to nine bulbs in a mass.

The depth for planting different sorts of Lilies varies greatly—some species will not thrive unless planted deep. On an average, we like to plant Lilies about 6 in. below the surface, which gives stem roots a chance to assist those under the bulb. They should not be laid in a scooped-out hole, but on a level loosened-up bottom, with some nice friable soil to root into, either singly or in clumps of three to six, each bulb 9 in. or so apart, according to sort.

For general cultivation in pots, the Lily likes nice, rich, loamy soil. When the bulbs come to hand, they should be loosely plunged into some damp material, such as coconut fibre or ashes, and placed in a shady and cool spot for, say, a fortnight.

The bulbs will now be in fit condition to be placed in pots (one bulb in a 32-size). The pot should be half filled, and the bulb put into it, and as the stem grows more soil may be added until the pot is full, and not over-watered until growth appears.

The finest of all Lilies for pot culture, alike for beauty, infinite variety, fragrance, and easy culture, are *L. AURATUM* and *L. LANCEFOLIUM*. Lilies for forcing should be started any time from the end of January to September. Under ordinary conditions Lilies may be had in bloom from June to November.

LILIUM AURATUM, the Golden-rayed Lily of Japan, is one of the most magnificent varieties. It can be forced into flower early in the summer, is most attractive when grown in a natural way and allowed to bloom in August, whilst its elegant relation the Easter Lily is invaluable as a winter and spring decorative plant, and is very largely grown for Christmas and Easter festivals, where its immense trumpet flowers of snow-like purity are invaluable.

LILIUM CANDIDUM.

The white Lily of English gardens, also known as the Madonna Lily, the Bourbon Lily, St. Joseph's Lily, and many other local names.

No other flower possesses such a record of historical associations as this white Lily, which in all ages has been deemed the emblem of purity and chastity. It is perfectly hardy, and thrives in almost any soil, preferably in beds and borders, where the bulb is not likely to be disturbed too often. Planted singly or in clumps in the autumn, from 4 to 6 in. deep, it will commence to grow almost at once, and throw up in the spring a strong stem clothed with leaves and headed in summer with a cluster of beautiful white blossoms, as shown above.

We recommend our customers to plant this variety early. Bulbs are ready beginning of September, and should be planted as soon as possible from that time onwards.

*Lilium Auratum.***CARTERS LILIUM AURATUM.***The beautiful Golden-rayed Lily of Japan.*

This grand Lily has now been brought to such a popular price that it should be largely grown in every garden. In soils suitable to its taste it will thrive in increased vigour each season in borders, and should be extensively cultivated in such spots. It can be seen in its full beauty in association with ornamental shrubs and bold-leaved herbaceous plants. It flowers rather later in summer than some of its relations.

We have again made arrangements for large consignments of this beautiful Lily to reach us direct from the growers, and are certain to handle the pick of the Japanese harvest.

All bulbs are carefully sorted by hand, and are examined personally before despatch.

Our consignments usually arrive from the middle of November onwards, and we book orders now for delivery as soon as the bulbs are to hand.

*Lilium Speciosum Rubrum.***CARTERS LILIUM SPECIOSUM.**

Next to the LILIUM AURATUM we must place the LANCEFOLIUM or SPECIOSUM, so exquisite in form and so easily cultivated. Specimens frequently may be seen flowering on balconies in the large cities late in summer, and coming at a time of year when flowers are somewhat scarce makes it doubly welcome. It thrives well out in the border, and, with its pure chaste white, orange, crimson-spotted, and rose-spotted flowers, is very attractive.

LILY OF THE VALLEY.

A crown is the description given to a single rootlet. They are generally sold in bundles of 25, and are the best for pots and forcing. When throwing up blossoms grown in this manner, they are most serviceable in a number of ways for decorative purposes. A clump is a large conglomerated mass of roots that will throw up a quantity of flowering spikes, either forced or when planted out of doors. Clumps are preferred for a permanent bed in the garden.

If by parcel post add postage at zone rates; weight of crowns 2 lb. per bundle of 25, 6 lb. per 100; weight of clumps 5 lb. each.

RETARDED LILY OF THE VALLEY.

By availing ourselves of the modern method of cold storage we are enabled to supply forcing roots of this pretty decorative plant throughout the year. One advantage these retarded roots have over those handled in the ordinary way is the quick time in which the flowers are produced. We have seen dormant crowns put into heat and brought into beautiful bloom within three weeks, but we recommend from four to five weeks as the average time for a perfect flower spike.

We have made arrangements by which a continuous supply may be assured.

MONARCH OF THE EAST.

(As originally named and offered by us.)

This remarkable plant exhibits one of those extraordinary traits in Nature that few are able to understand, for the magnificent flowers actually come out of the dry bulb without being placed in soil and water.

The flower sheath sometimes reaches a length of nearly 2 ft., is of a red-brown colour, tipped with red and yellow, whilst the inner parts of the flower are equally as brilliant. The bulb of this extraordinary plant needs only to be placed in some fancy receptacle, WITHOUT WATER, in a warm room, or on a mantel-shelf, when, without showing either leaves or roots, the flower makes its appearance early in the year, thriving entirely upon the nourishment contained within the bulb.

Directly after the flower fades, and a growth appears to be coming from the bulb, it should be potted in a large pot in rich soil and freely watered. Later on an umbrella-shaped leaf will be formed on a stout stalk, spotted with a granite-like colour, and sometimes reaching a height of 3 ft.

CARTERS KING ALFRED.

THE ARISTOCRAT OF THE DAFFODIL WORLD.

SPECIALLY
NOTE OUR
LOW PRICE
FOR THIS
BEAUTIFUL
DAFFODIL.

THE GREAT TRUMPET-FLOWERED DAFFODIL OF THE SOUTH. Ht. 2 ft. FIRST CLASS CERTIFICATE, ROYAL HORTICULTURAL SOCIETY OF ENGLAND. FIRST CLASS CERTIFICATE, BOSTON, U.S.A. FIRST PRIZE, NEW YORK, U.S.A., APRIL, 1913.

This magnificent Giant-flowered Trumpet Narcissus is without doubt unsurpassable for the size and beauty of its flower. Its height gives it a most stately appearance and places it far in advance of all other Trumpet varieties. Visitors to the Royal Horticultural Society's Spring Meetings at Vincent Square, London, will recall the many displays of this lovely flower associated with our Spring Gardens. The trumpet itself is a rich deep pure yellow (the colour of old gold); it is of great size and substance, and is exquisitely finished; the mouth is turned well back and is beautifully frilled.

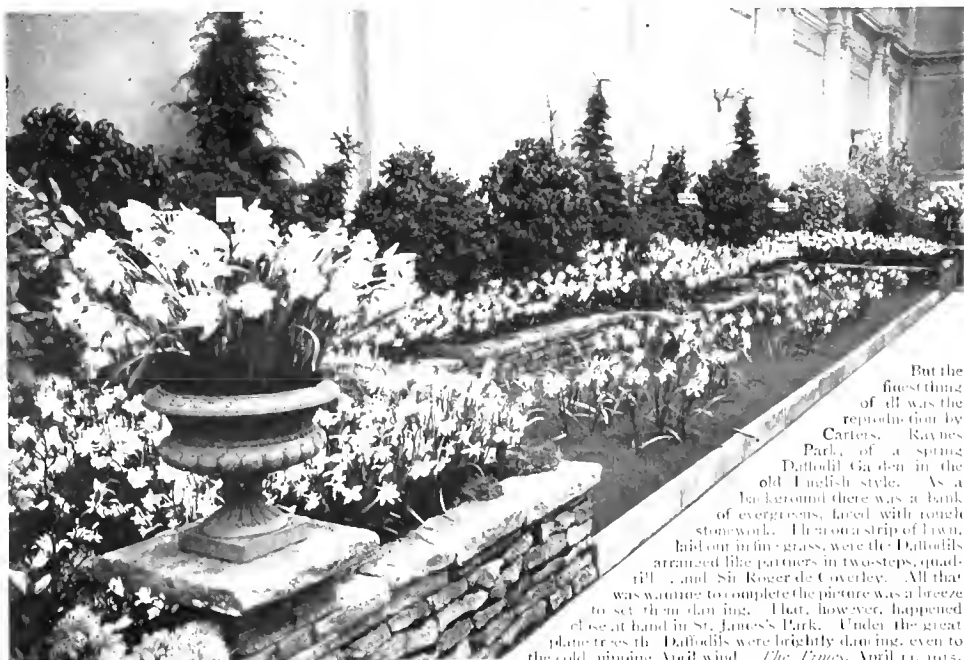

The perianth is of the same rich yellow shade as the trumpet, very thick and strong, and magnificently formed, thus making a perfect setting for the immense trumpet which it carries. The foliage has a delicate glaucous tint, and is in perfect keeping with the general character of this truly unique Narcissus. The variety is an early one, flowering in a favourable season in March.

Carters King Alfred is the great Narcissus of the day; it is quite distinct, is a vigorous grower, thriving equally as well under glass as out of doors. To see a mass of these beautiful flowers on a spring morning gently swayed by the wind is indeed a sight not easy for anyone to forget; the sun striking the blooms, and its golden rays reflected in the dew, give a bed of these charming flowers an appearance which may well be compared to a mass of diamonds glittering in a setting of burnished gold. *Carters
King Alfred.*

Messrs. Carters, Raynes Park, again presented a delightful spring display in the form of a raised border with a lawn in front, which was artistically enriched with Trumpet Daffodils. The background formed a shrubbery, with the Daffodils grouped at the base; these were arranged in masses, and included such varieties as Queen Alexandra, Sir Francis Drake, Minnie Hume, a charming variety for this purpose; King Alfred, remarkably good; and Argent. The exhibit was greatly admired. *Journal of Horticulture*, April 15, 1915.

But the finest thing of all was the reproduction by Carters, Raynes Park, of a Spring Daffodil Garden in the old English style. As a background there was a bank of evergreens, faced with rough stonework. Through a strip of lawn, laid out in fine grass, were the Daffodils arranged like partners in two steps, quadrille, and Sir Roger de Coverley. All that was wanting to complete the picture was a breeze to set them dancing. That, however, happened close at hand in St. James's Park. Under the great plane trees the Daffodils were brightly dancing, even to the cold, nipping April wind. *The Times*, April 14, 1915.

NARCISSUS AND DAFFODILS—Continued.

POETAZ NARCISSUS.

A new and distinct race of Narcissus, being the result of crossing Poeticus with selected varieties of Narcissus Polyanthus; they have the robust habit of the Polyanthus, bearing trusses of fine, large, and sweet-scented flowers, and combining the hardiness of the Poeticus Ornatus. They will force splendidly, and for bedding and cutting are unequalled.

If by parcel post add postage at zone rates; weight 1 lb. per doz., 8 lb. per 100. Single bulbs mailed free.

ROOM GARDENING.

*White Hyacinths.**Narcissus, Sir Watkin.**Narcissus, Madame Plémp.**Tulip, Marechal Niel.*

This mode of room decoration was introduced by us some years since, when we offered the bulbs planted with shingle in gaily decorated Japanese bowls. Continued experiments have enabled us to extend our list of successful subjects, and *the bulbs are quoted at prices planted in beautifully finished artistic green glazed and other bowls.* Instead of employing shingle for the rooting material now we use a specially prepared fibre, which we find very suitable, being cleanly, light, and quite odourless. When our materials are used the following hints on cultivation should be followed. We send out the bulbs ready planted in the bowls, but in cases where customers prefer to use their own bowls, the bulbs should be planted as follows:—Sprinkle fibre, which should be thoroughly moistened, over the bottom of the bowl to a depth of $1\frac{1}{2}$ inches, carefully place the bulbs upon the fibre, taking care that they do not touch each other, then fill up the bowl with fibre. Although it is desirable that the fibre should be all around the bulbs, it must not be packed too tightly, and must cover the top of the bulbs.

Start the bulbs into growth by thoroughly saturating the fibre with water, drain off and keep moist; then place the bowl in an airy room or shelf in a subdued light. When the young growth pierces the fibre, the bulbs may be placed on a table near a window or some other light place to mature their growth and come into flower.

RANUNCULUS.

This beautiful early summer border plant belongs to the buttercup family. The types now popular in the class under consideration would, from their gay appearance both in form and colour, be hardly recognised as a relation to this modest denizen of the field. The cultural directions are practically the same as advised for Anemones.

All mailed free.

Carters Cockade.—In a splendid variety of colours, immense double flowers. Is fitting in all respects to be cultivated by the side of the *Empress Poppy* Anemone, and equally superior with that variety to any other class of Ranunculus. The flowers are double, of immense size, and combine every possible shade of colour peculiar to this interesting and easily-cultivated flower. It is impossible to over-estimate their value to all lovers of hardy border flowers.

Per doz., .30; per 100, 2.00; per 1,000, 15.00

Double Persian Ranunculus, Mixed.—A very pretty flower when well grown.

Per doz., .20; per 100, 1.25; per 1,000, 10.00

SCILLAS.

Scillas are of easy cultivation, and will thrive almost anywhere. Perhaps the best-known garden variety is the beautiful blue Siberian Scilla, which flowers early in the year in any position in the open ground. The white *Siberica Alba* and *Campulata Alba* are both varieties which should be more widely known.

If by parcel post add postage at zone rates; weight given against each sort. Dozens mailed free.

Siberica (The Siberian Squill).—Rich blue, largely planted for naturalisation in the Royal Parks. Ht. 3 to 4 in. Extra large bulbs. Weight 1 lb. per 100.

Per doz., .20; per 100, 1.25; per 1,000, 10.00

SPIRÆA.

If by parcel post add postage at zone rates; weight 2 lb. per clump or 18 lb. per dozen.

Queen Alexandra.
Snowdrift. *Gladstone.*

These embrace a large number of species, varying from shrubby bushes to small herbaceous plants. It is with the latter that we are just now most concerned—such as are used in the winter and spring decoration of rooms and conservatories. The dormant roots are supplied in clumps, which are placed singly into 6-in. pots or a size larger if necessary. If given plenty of water as soon as they commence to grow, and kept in heat, they will become effective very quickly.

Two charming varieties.

Queen Alexandra (*top Photograph*).—Produces long feathery plumes of bright pink flowers, and together with *Peach Blossom*, has been greatly admired at various Royal Horticultural and other shows. Large dormant roots.

Each, .25; per doz., 2.50; per 100, 16.00

Peach Blossom.—Produces flowers of a lighter shade of pink than *Queen Alexandra*, but from their delicacy of colouring when in bloom we are certain that these two charming Spiræas will be extensively used for house and table decoration. Large dormant roots.

Each, .20; per doz., 2.00; per 100, 14.00

Astilboides Floribunda.—An improved form; very free flowering.

Each, .20; per doz., 2.00; per 100, 14.00

Avalanche.—A very fine new variety bearing large trusses of pure white flowers. Strongly recommended.

Each, .30; per doz., 3.00; per 100, 20.00

Gladstone (*bottom right-hand Photograph*).—Grand free-flowering white variety; bearing large trusses of bloom.

Each, .20; per doz., 2.00; per 100, 14.00

Japonica.—Extra strong clumps for forcing or borders; valuable for table decoration.

Each, .15; per doz., 1.50; per 100, 10.00

Rubens.—A new variety of great merit; colour, carmine rose; free flowering and excellent for forcing.

Each, .50; per doz., 5.00; per 100, 35.00

Snowdrift (*bottom left-hand Photograph*).—Produces in profusion a mass of elegant feathery white blossoms of the greatest value for decorative purposes at any season, according to the method of cultivation, from Christmas to Midsummer. The roots are supplied in large dormant clumps.

Each, .20; per doz., 2.00; per 100, 14.00

TRITELEIA.

Are exceedingly pretty in a spring border, where they should be permitted to remain and produce their blossoms. The flowers are star-shaped, and can be forced. Also equally suitable for rockwork. Ht. 6 in.

Uniflora.—Pretty star-shaped white flower. *Mailed free.*

Per doz., .12; per 100, .90; per 1,000, 8.00

Violacea.—Porcelain blue. *Mailed free.*

Per doz., .12; per 100, .90; per 1,000, 8.00

TULIPS.

For our customers' guidance when making a selection of Tulips, we have numbered each variety in their order of flowering (No. 1 blooming first), so that by a careful selection a nice succession of blooms may be obtained, or, on the other hand, a grand display may be ensured by choosing only those varieties with the same number. For beautiful colour effects we refer our readers to page 41 for our Royal Parks Selection of Single varieties, and for the Royal Parks Double varieties. These are selected for simultaneous flowering in each section, the Doubles being a week or so later than the Singles.

Formed with Carters Tulips, Hyacinths, Crocus, and other Bulbous Flowers in association with Carters Lawn Grass.

Carters Garden of Darwin Tulips (pages 43-45) in the Royal Horticultural Society's Hall, May, 1914, was awarded the Society's Silver Banksian Medal.

DUC VAN THOL TULIPS. FOR FORCING.

If by parcel post add postage at zone rates; weight 4 lb. per 100. Dozens mailed free.

These varieties are valuable for very early forcing, are dwarf in habit, and for conservatory decoration in winter they are extremely handsome and useful.

Cochineal.—Superb cochineal scarlet variety, much larger and taller flower than the other sorts in this section; strongly recommended. Ht. 9 in.

Per doz., .30; per 100, 2.00; per 1,000, 15.00

Rose.—Pretty rose and white flaked variety, pointed petals. Ht. 7 in.

Per doz., .25; per 100, 1.50; per 1,000, 12.00

CARTERS GOLD MEDAL EXHIBIT.

"Messrs. James Carter & Co. surpassed their previous exhibits. Despite the fact that enlistments among employees have been very heavy, it has been possible to maintain the excellence of output. Their great bank of flowers, blazing with every conceivable shade of colour, was edged with lawn grass, which reminded one instinctively of the greenest grass grown."

Daily Chronicle, May, 1916.

A NEW RACE OF TULIP.

Carters Pluriflores Tulip, Mons. S. Mottet (see Photograph). This variety is the forerunner of an entirely new race of Tulips which produce several flowers on a stem, and the photograph gives a very good idea of its floriferous character (but does not convey as we should wish the large size of flower), being a trial portion in our grounds at Raynes Park. The flowers open creamy white, are of a delicate silky texture, and when fully matured develop at edge a pleasing pink tinge which gradually flushes almost the entire flower. We are anticipating a large sale for this striking novelty. **Stock limited.**

Messrs. CARTER & Co.—DEAR SIRS,—The Darwin Tulip Bulbs supplied by your firm (4,000) last autumn have made a grand display this spring, both for size of bloom and length and strength of stem. I have never seen anything to equal them. Mrs. Brandt has asked me to write and say how pleased she has been with them, and how greatly they have been admired by her friends.—Yours faithfully,

(Signed) THOS. HERON, Steward.

TERMS OF BUSINESS.

NEW CUSTOMERS.

New Customers are requested to send cash with order or else furnish satisfactory references, and in order to save time, those pertaining to Boston are preferred. If this is not done, we will assume that our customer wishes to pay cash on delivery, and, in consequence, the goods will be sent C.O.D.

REMITTANCES.

Post Office Money Orders, Bank Drafts, Registered Letters, or Express Money Orders are acceptable, and we must disclaim all responsibility when remittances are made in any other way. All cheques, etc., should be drawn in favour of "Carters Tested Seeds Inc."

PRICES AND TERMS.

The prices quoted in this catalogue are those prevailing at this date and are subject to change without notice. All terms of payment are net cash.

ORDERS.

Purchasers should order early to ensure a prompt, seasonable shipment of their goods. Do not wait until season is too far advanced; send your order in now for future shipment. All orders should be written separately from general letters or letters of inquiry. Please write the name and address in full, also be very particular to give the number of street or Post Office Box when goods are to be sent by mail, and when ordering goods forwarded by express or freight always state clearly the express or freight station.

DELIVERY OF GOODS.

When orders are accompanied by cash we deliver free to any Post Office, Railroad, Express Office, or Freight Station at our expense, all vegetable and flower seed orders at the packet, ounce, quarter pound, half pound, and pound prices, also bulbs at the single and dozen rates, except where otherwise noted. Purchasers must pay transit on pint, quart, peck, and bushel lots, also plants and bulbs unless otherwise noted, tools, fertilizers, and insecticides, etc. All f.o.b. Boston. Note, we will, upon inquiry, advise Customers of the approximate cost of mailing or express charges of any special items.

CHANGE OF ADDRESS

Please notify us of any change of Permanent Address, in order that we may be able to forward our Catalogues with regularity. The favour of your kind recommendation of our House to those of your friends requiring Seeds for the Garden or Farm, or Plants and Bulbs for the Garden or Conservatory, is respectfully solicited. We shall be pleased, at all times, to forward our Catalogues to any address we may be favoured with.

NOTICE TO PURCHASERS.

All letters are opened under directions of one of our principals, and the orders are given out under special supervision. Bulb and plant orders are sometimes delayed by severe cold or hot weather, and they at all times take longer to execute than seed orders in consequence of the care in counting and packing. Customers should always retain a true copy of the order sent to us. It is also our earnest desire that all the requirements and directions of customers be scrupulously attended to by our assistants, *and we practise the utmost personal supervision to see that they are carried out.* We would therefore respectfully request that we be informed if at any time there is cause for dissatisfaction, that we may have it rectified at the earliest possible moment.

AS TO CORRESPONDENCE

Any proper letter of inquiry will receive our careful attention and be answered promptly, but our friends will favour us by stating all questions clearly and briefly and not using the order sheet.

ACCIDENTS IN TRANSIT.

Glass, Pottery, and other goods liable to breakage are sent out securely packed, but beyond that we cannot be responsible for damage in transit. Notice of damage should be at once made to, and compensation claimed from the express or freight companies which delivered the article. Never sign for goods damaged in transit.

CONDITIONS OF GUARANTEE OF QUALITY

We guarantee our Seeds and Bulbs according to the quality purchased to be of the highest average standard of vitality of the season, and it is open to the purchaser to confirm this by submitting the samples to professional analysis at his own expense. We cannot, however, be in any way responsible for the produce of Seeds sold under this guarantee, or for errors of description; and it must therefore be clearly understood that our responsibility ceases upon the final acceptance of the goods, and while we exercise the greatest care to have all seeds, bulbs, plants, and shrubs true to name, we can give no warranty, express or implied, as to description, quality, productiveness, or any other matter of seeds, bulbs, and plants we send out, and will not be held responsible for the crop. If the purchaser does not accept the goods on these terms and conditions, they must be returned at once and money will be refunded.
